# So I asked ChatGPT+ to introduce me in 75 words...

Dr. Jon Dron, a distinguished figure in learning technologies and distance education, has carved an impressive academic trajectory from Sussex University to his current position at Athabasca University. Recognized as a National Teaching Fellow in the UK, he's acclaimed for merging passionate teaching with groundbreaking research. His expertise spans from social learning and motivation to innovative pedagogies for online education. A prolific writer and speaker, Dron's contributions are globally acknowledged and revered.

**Whose (or what's)  
intelligence is this?**

# First, some theory

<https://howeducationworks.ca>

# Defining “technology”

W. Brian Arthur:

The orchestration of phenomena to our use

me:

**organizing stuff to do stuff**

Including what we do, what has been done,  
and what we do with what has been done

*any*  
stuff

# What can be done with this?

# We are part-technology. Technology is part-us.

## Participants, not (just) users

# Technique

**What we do with what has been done**

**A technology enacted by a human**

# Hard technique

**We are parts of the orchestration  
(methods, processes, procedures)**

# Soft technique

**We are the orchestrators  
(the ways we do stuff)**

Most technologies demand a mix of both **hard** and **soft** technique.

Some, like pencils or language, are innately soft. Others, like production lines or regulations, tend to be hard

**Through our technologies we  
participate in the collective  
intelligence of our species**

**No one learns alone**

**No one teaches alone**

**Almost all of our  
intelligence is  
artificial**

# Education

**Developing the techniques  
needed to participate in our  
societies**

**A technology built from  
countless technologies**

# Pedagogies are technologies, too

# We are all learning technologists

# Co-participants

Everyone is a teacher

And so are our creations

# If education is a technology, what is it for?

# Harder

# Achieving learning outcomes

# Gaining credentials

## Learning useful skills

# Remembering important facts

# Learning how to behave

# Softer

# Learning to think

# Learning values

# Learning to live, work, and play with others

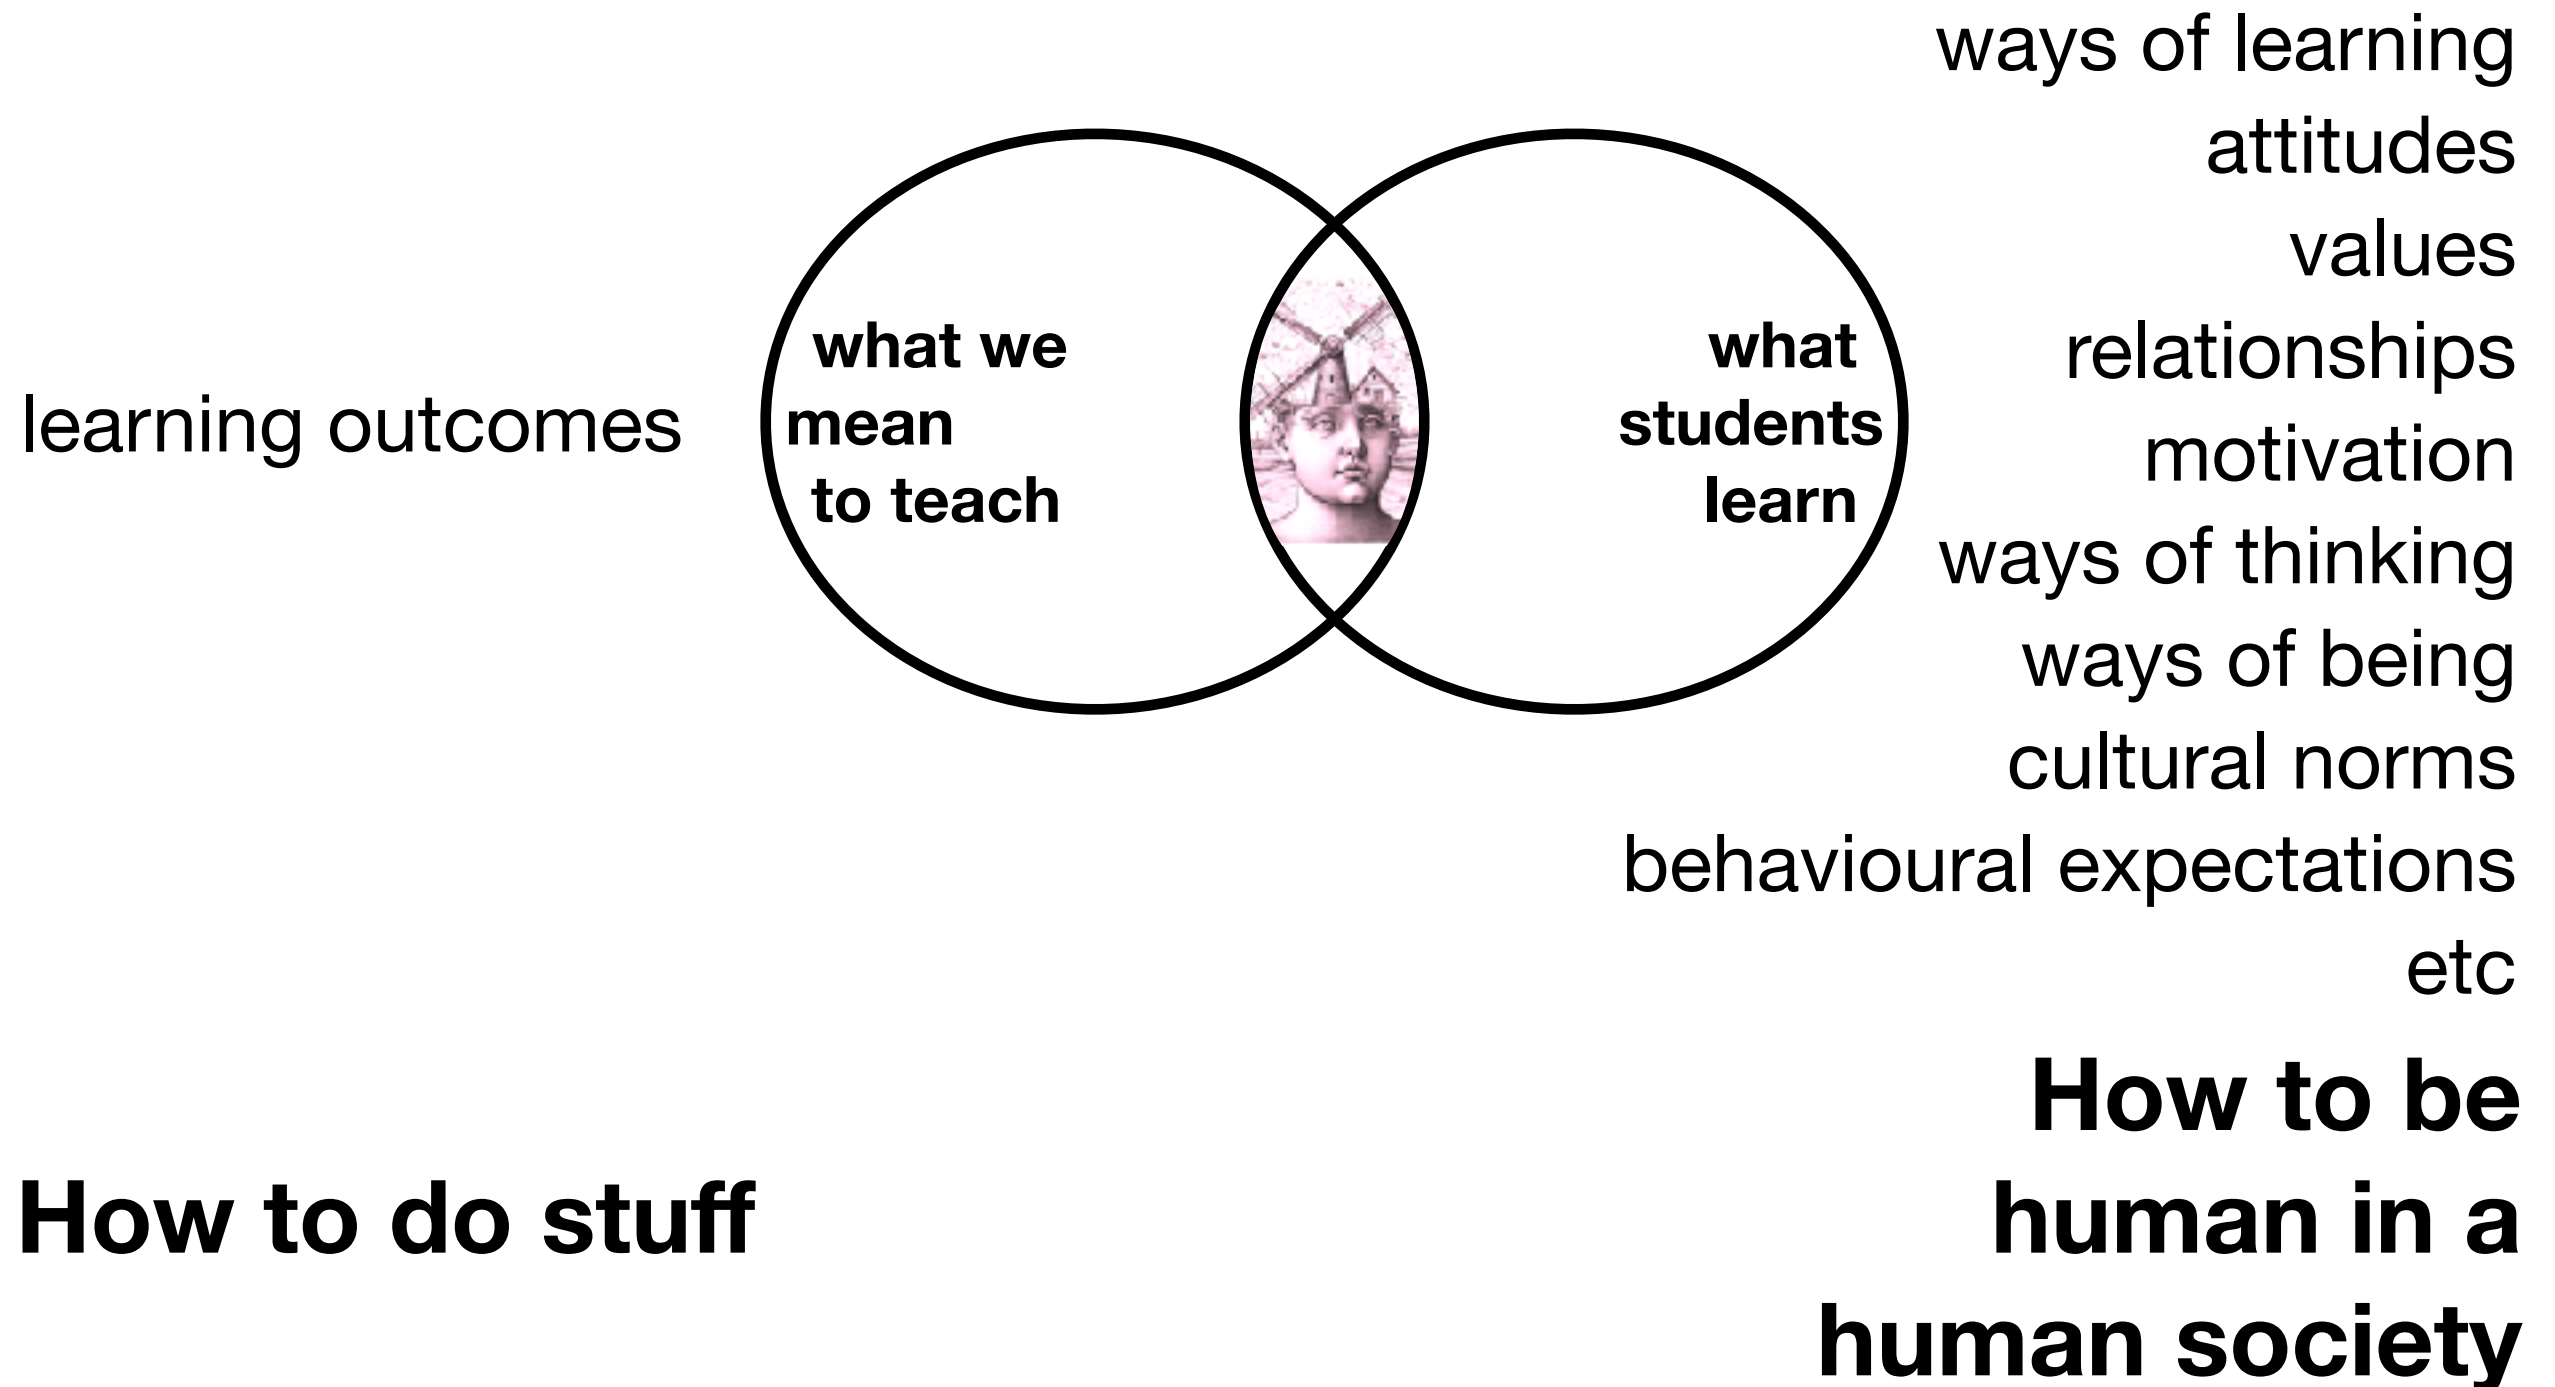

# Learning to live well

# Learning to adapt

# Sustaining happy, safe societies

# The grist.

# The mill.

**What happens when we learn to  
be human from things that are  
not (quite) human?**

Until now, automation has replaced only **hard** technique

Generative  
Als automate  
and replace  
**soft**  
technique

# Generative AIs

Remixed  
collective  
*human*  
intelligence  
and creativity

# Signals, but no signification

# A dystopian future?

Soft skills that atrophy

Soft skills that are never learned

Ways of being that are not quite human

Machines trained on the output of machines

Machines trained on the output of people  
who are taught by machines

# Evading the AI apocalypse

A black and white illustration. On the left, a man with glasses, a mustache, and a suit is shown in profile, facing right. On the right, a robot with a detailed, mechanical head and torso is shown in profile, facing left. Their hands are clasped in a handshake. The background is plain white.

# Contractors and team members, not tools

Separate roles, not overlapping

# Supports for human connection

# Decoupling credentials

# Reclaiming the social

**Courses as communities  
vs courses as products**

# Refocusing education
