

Understanding collective stupidity in social computing systems

MScIS Seminar Series

Jon Dron, February 2024

Collective Intelligence

What is Collective Intelligence?

a fuzzy, diversely applied term

- stigmergic and emergent swarms, flocks, hives, nests, trails, etc
- group behaviours towards intentional goals
- distributed cognition
- global brain
- 4E cognition
- civic intelligence
- aggregate behaviours
- extended mind
- crowd wisdom
- connectomes
- cultural accumulation
- etc

stupid mobs, wise crowds, smart organizations, etc

What *is* intelligence?

**So let's talk about collectives
(or collective cognition/agents)**

My shifting interests in collectives

wisdom of crowds

diversity

independence

decentralization

aggregation

stupidity of mobs

uniformity

dependence

centralization

separation

Social media

digital systems that only have value if they are used by at least two mutually affective participants

Technology

W. Brian Arthur:

The orchestration of phenomena to our use

me:

organizing stuff to do stuff

including (nearly always) other stuff organized to do stuff

Collectives in social media

human-enacted algorithms

machine-enacted algorithms

Intelligent for whom?

amazon

Baidu 百度

TikTok

TRUTH

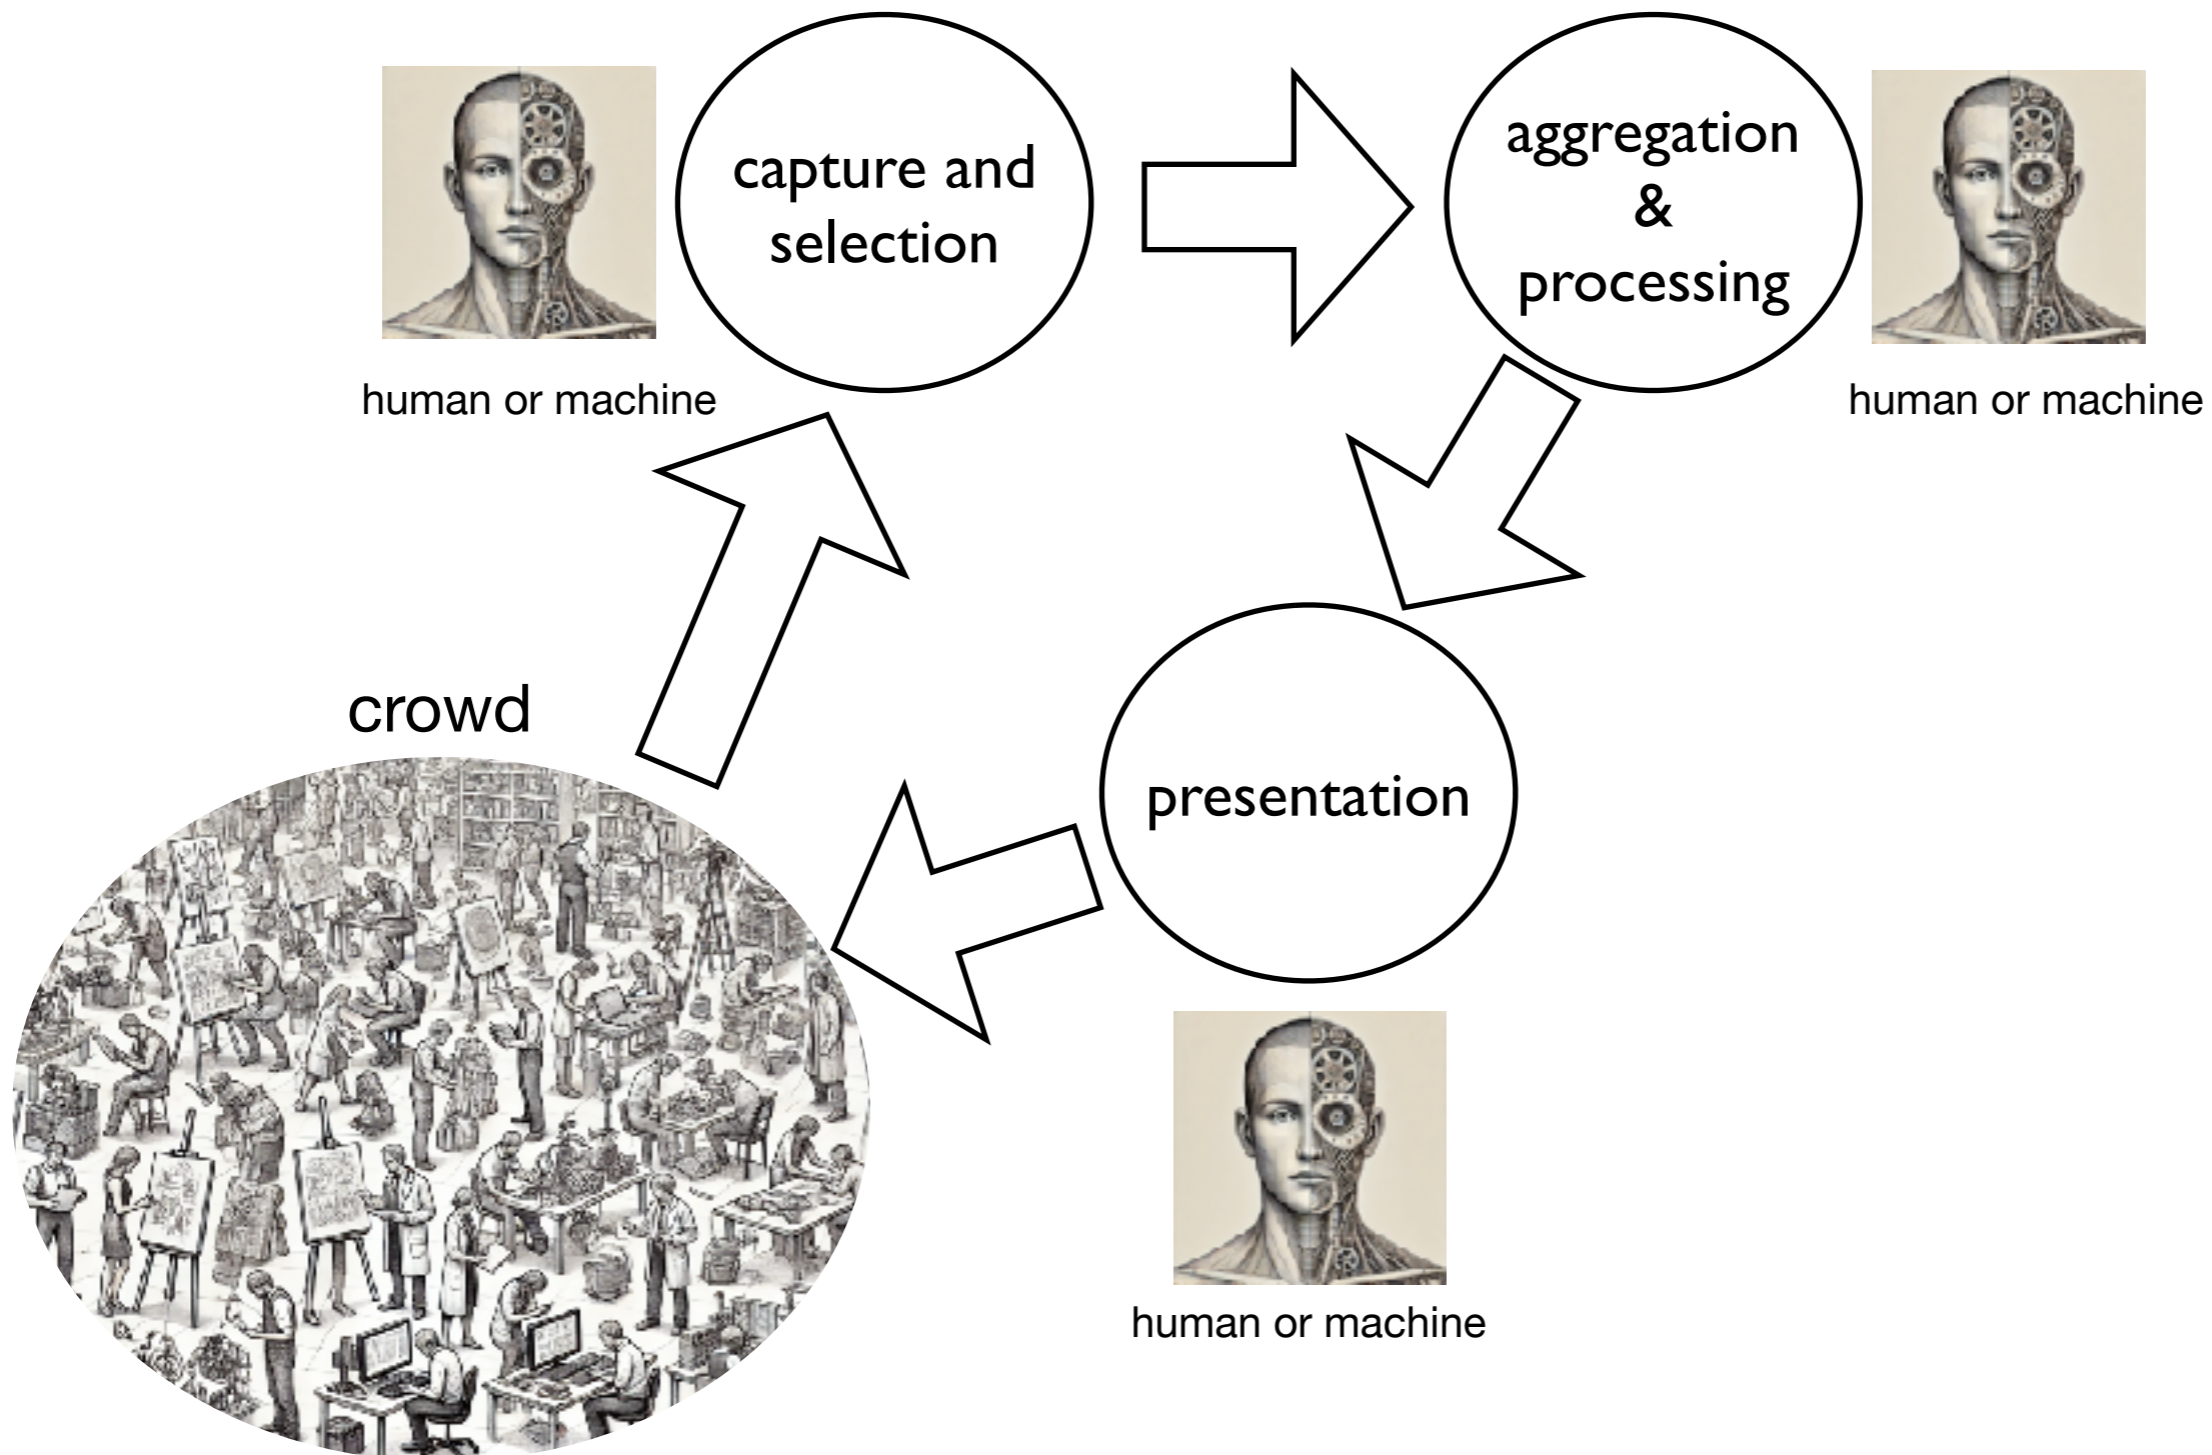

Microsoft

facebook

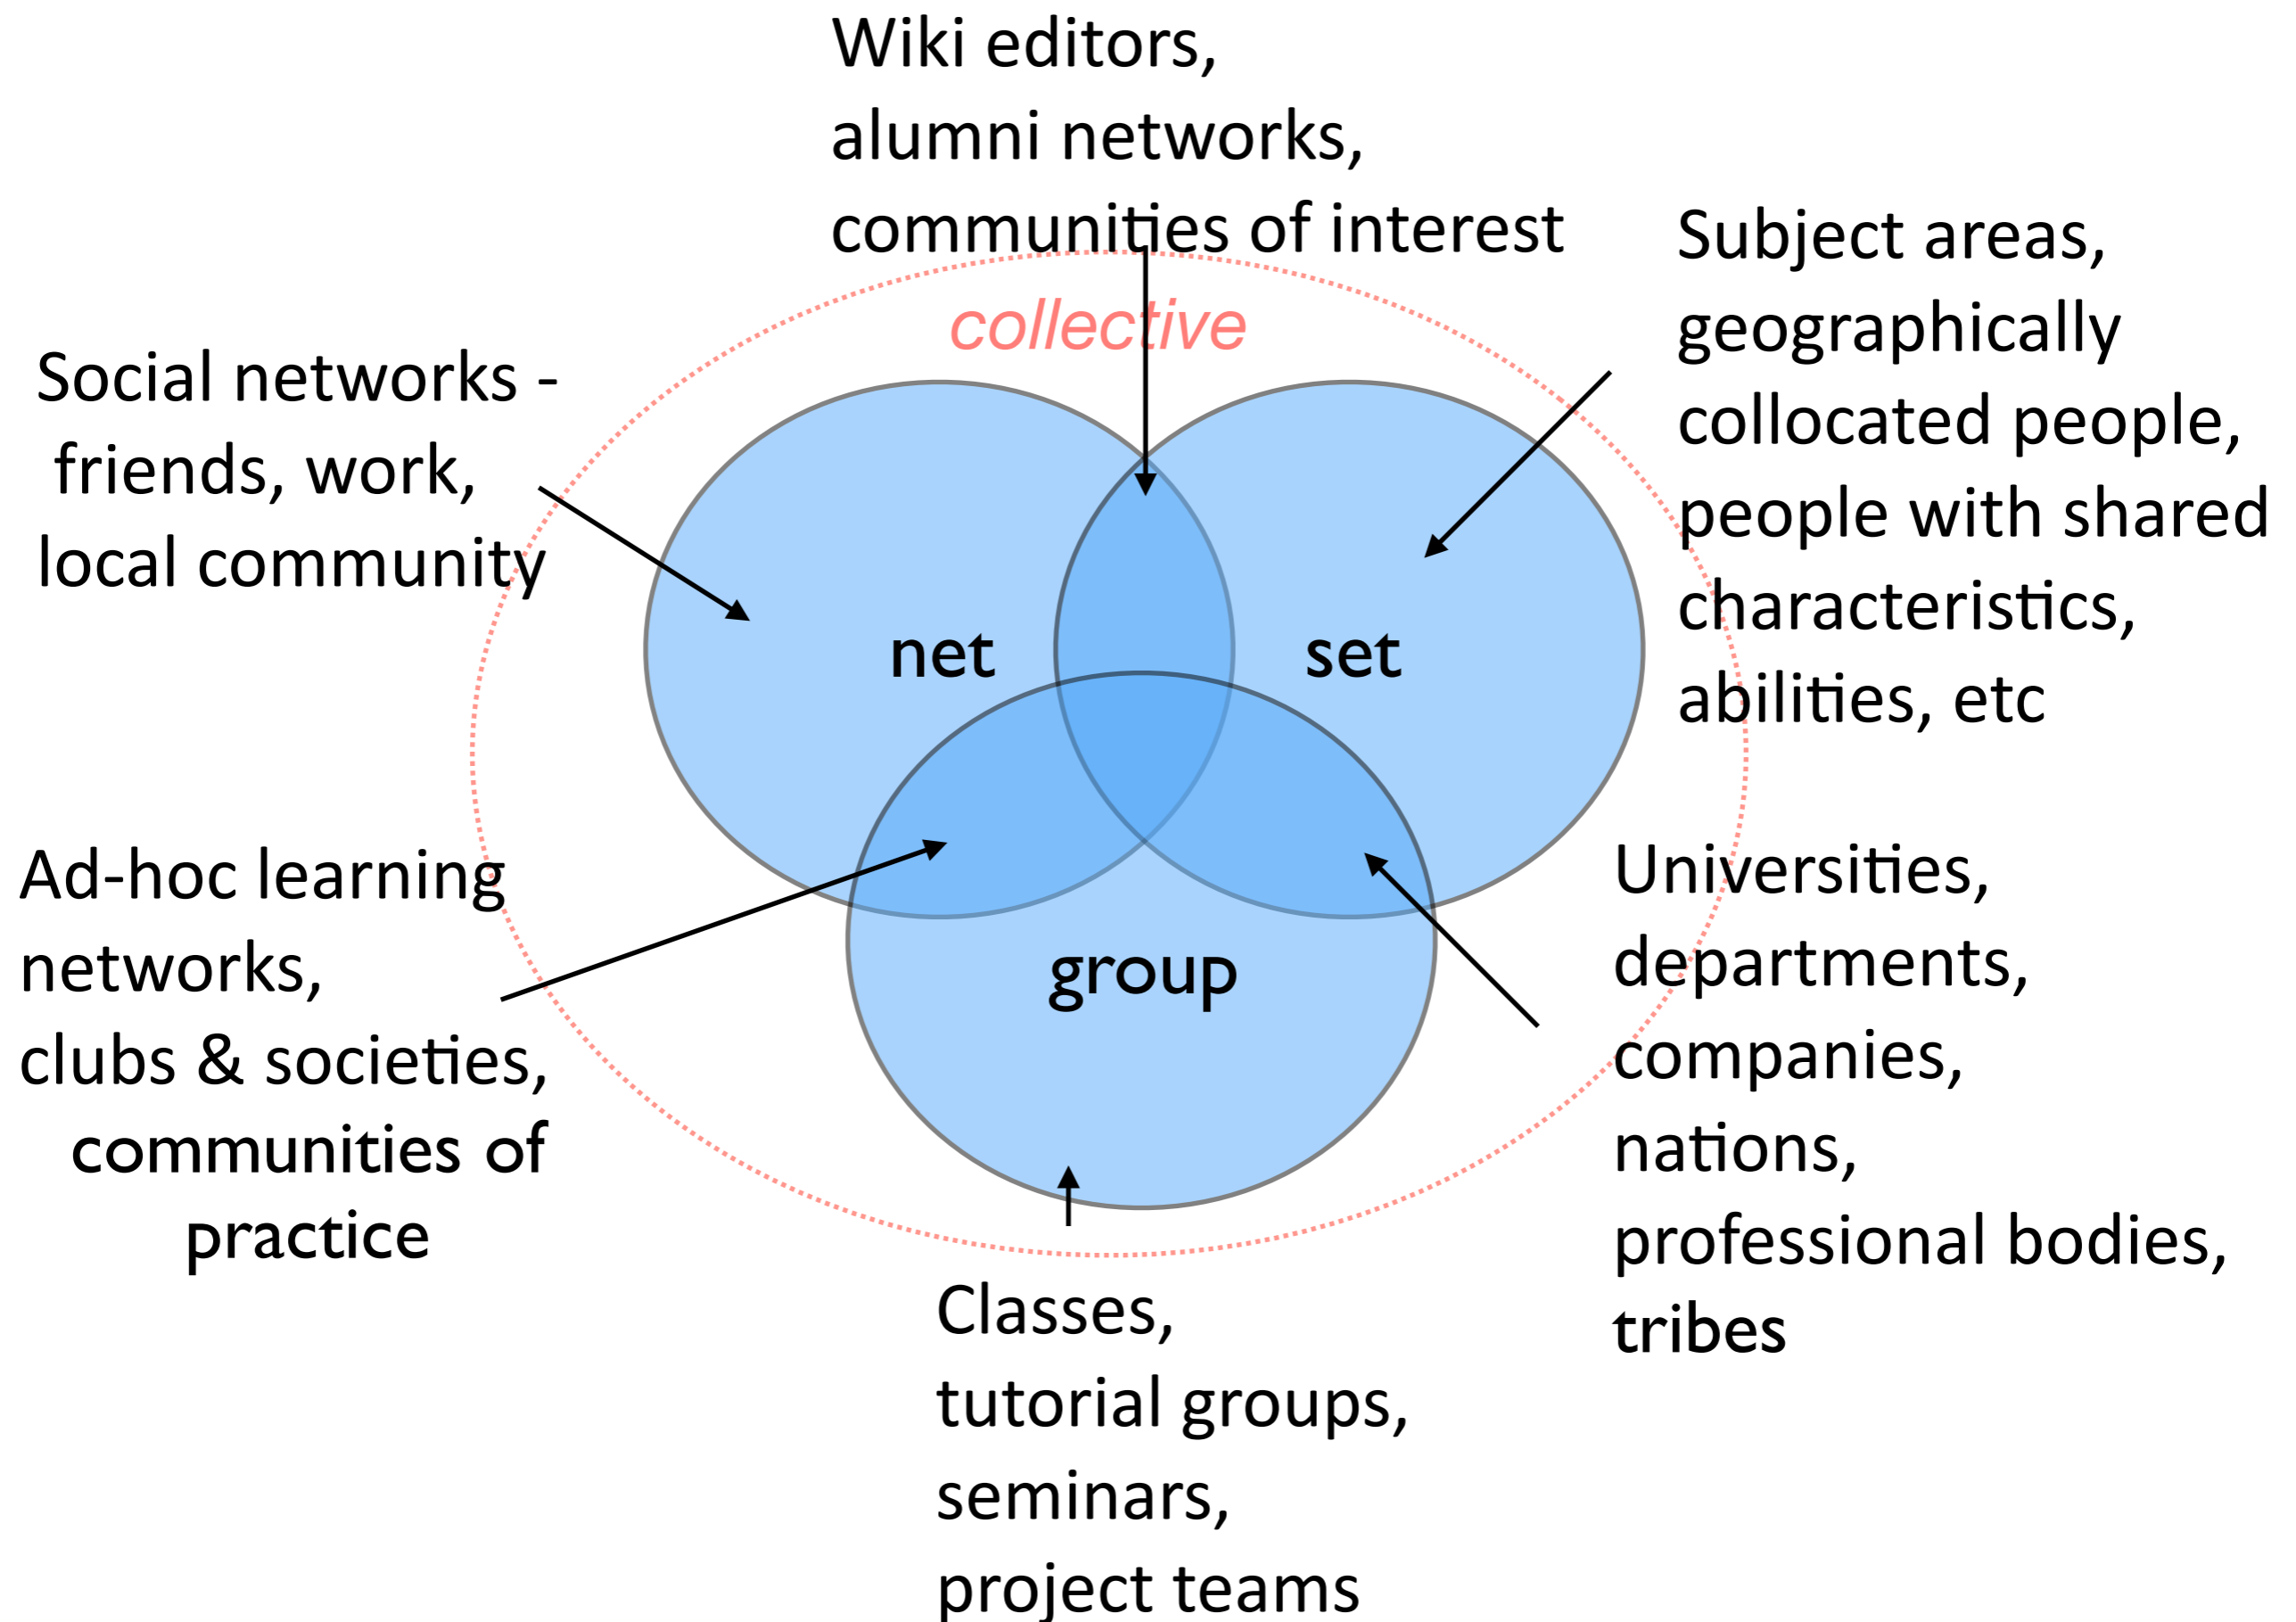

Instagram

Generic collectives

Blendable social forms (what I used to think)

duration identity purposes rituals

names leaders pace rules

sequence

processes

exclusion

norms

Groups

are

**technologies that utilize
and form sets and nets**

collaboration and contest

hierarchies

structure

power relationships

membership

joining and leaving

lack of process

inefficient paths

lack of direction/control

ownership

preferential attachment

intentional manipulation

network problems that groups solve

connection trumps wisdom

lack of structure

context collapse

distraction

echo chambers

Matthew Effect

narcissism

reliability

bad people

stupid people

trolls

blind leading the blind

anonymity

lack of process

Set problems that groups solve

cultural conflict

lack of caring

lack of structure

disputes

lack of trust

context collapse

weak social ties

But groups are a Faustian Bargain

Groupthink

Exclusion

Scalability

Restricted pace, time, tools,
etc

Embedded power
imbalances

Freeloading

Coordination complexity

Pathological norms (e.g.
politeness, competition)

lack of process

reliability

Net/set/group problems that collectives (can) solve

equity

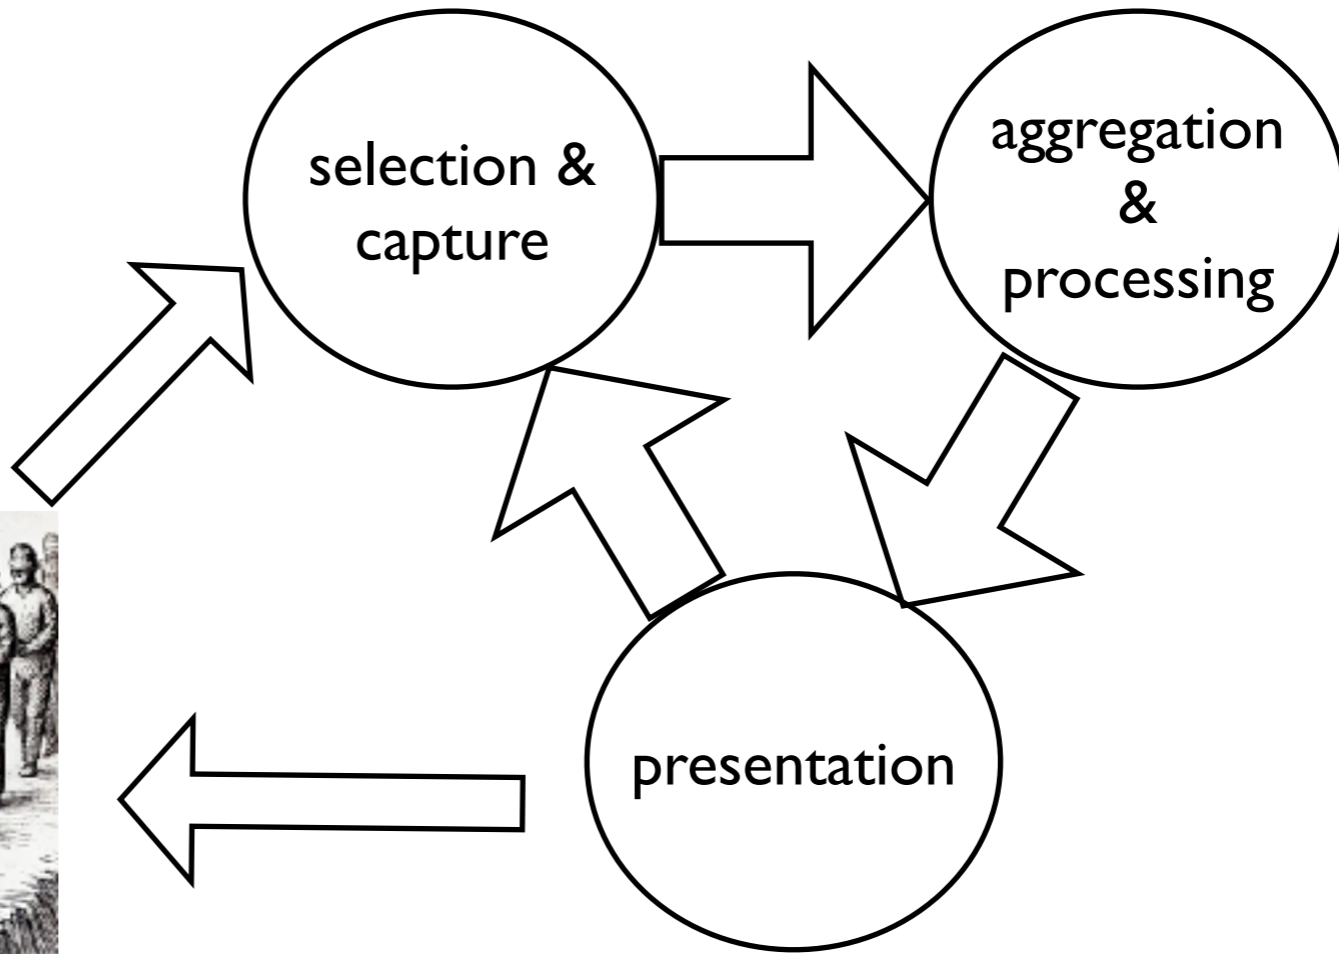

lack of structure

lack of trust

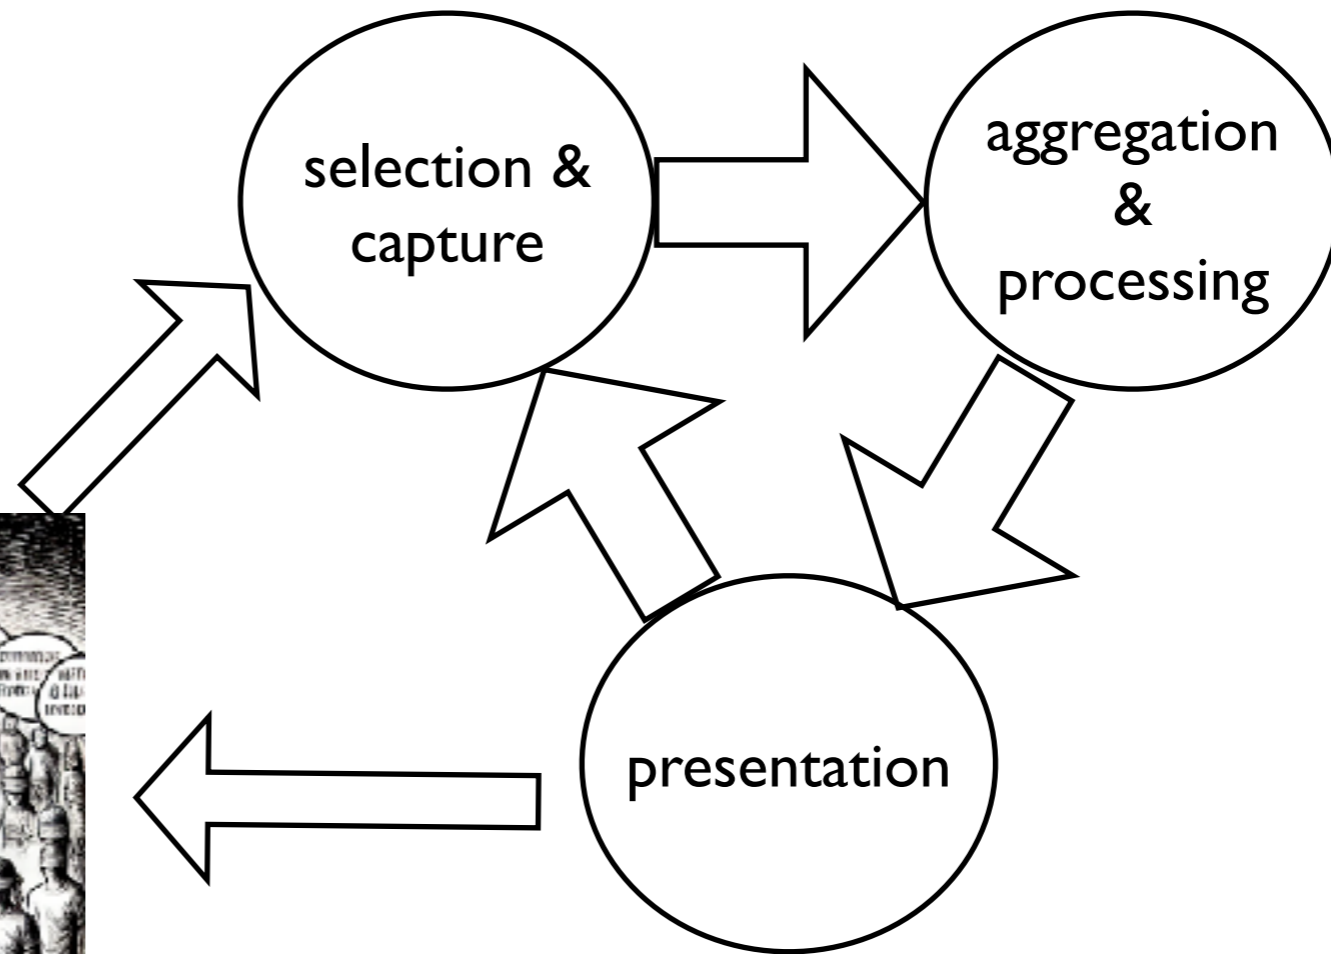

scalability

**but collectives have their
own problems...**

Blind leading the blind

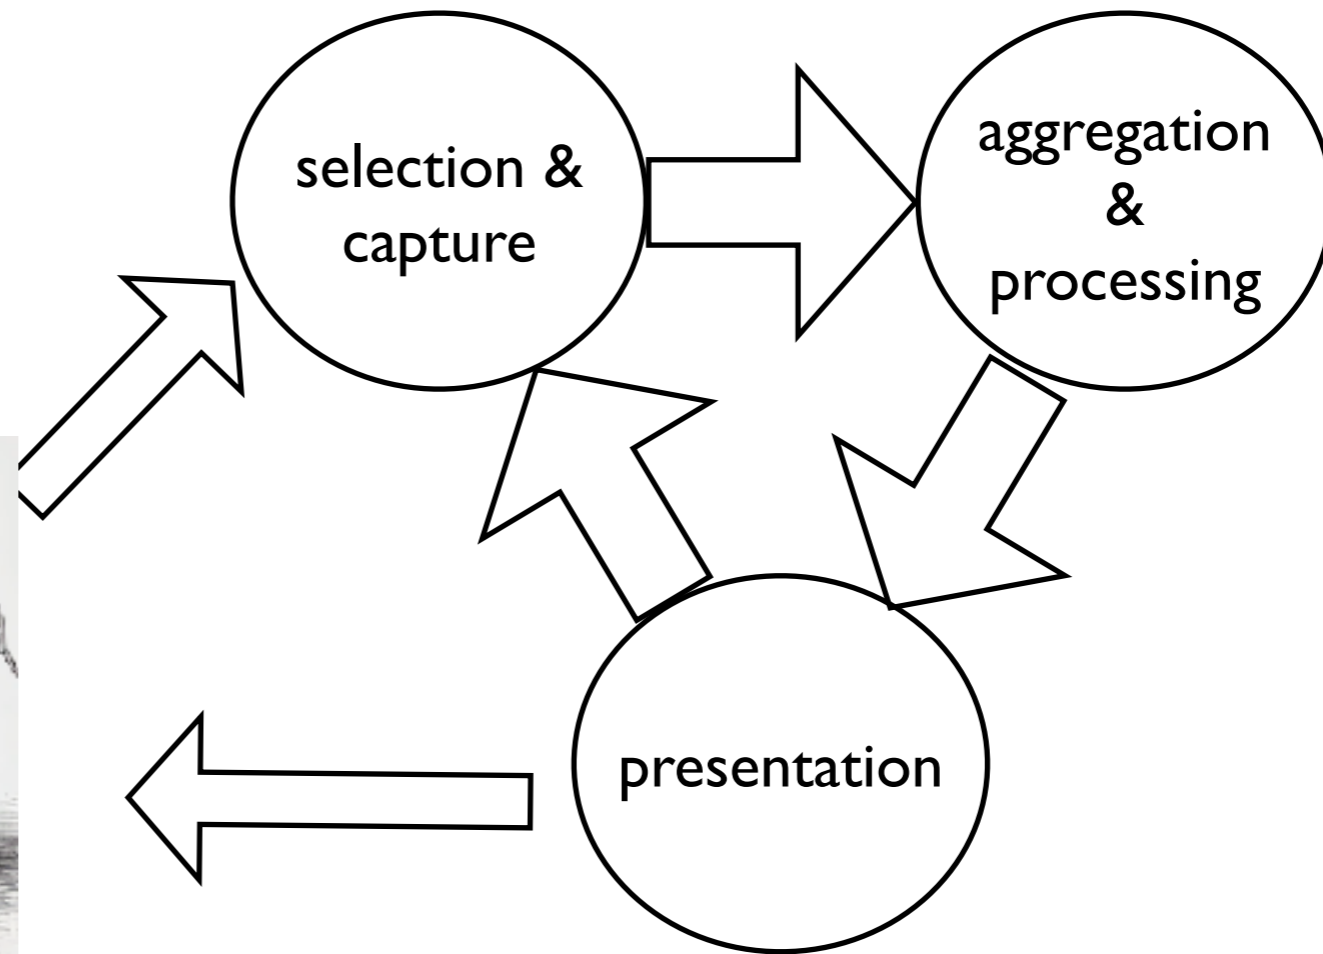

Echo chambers

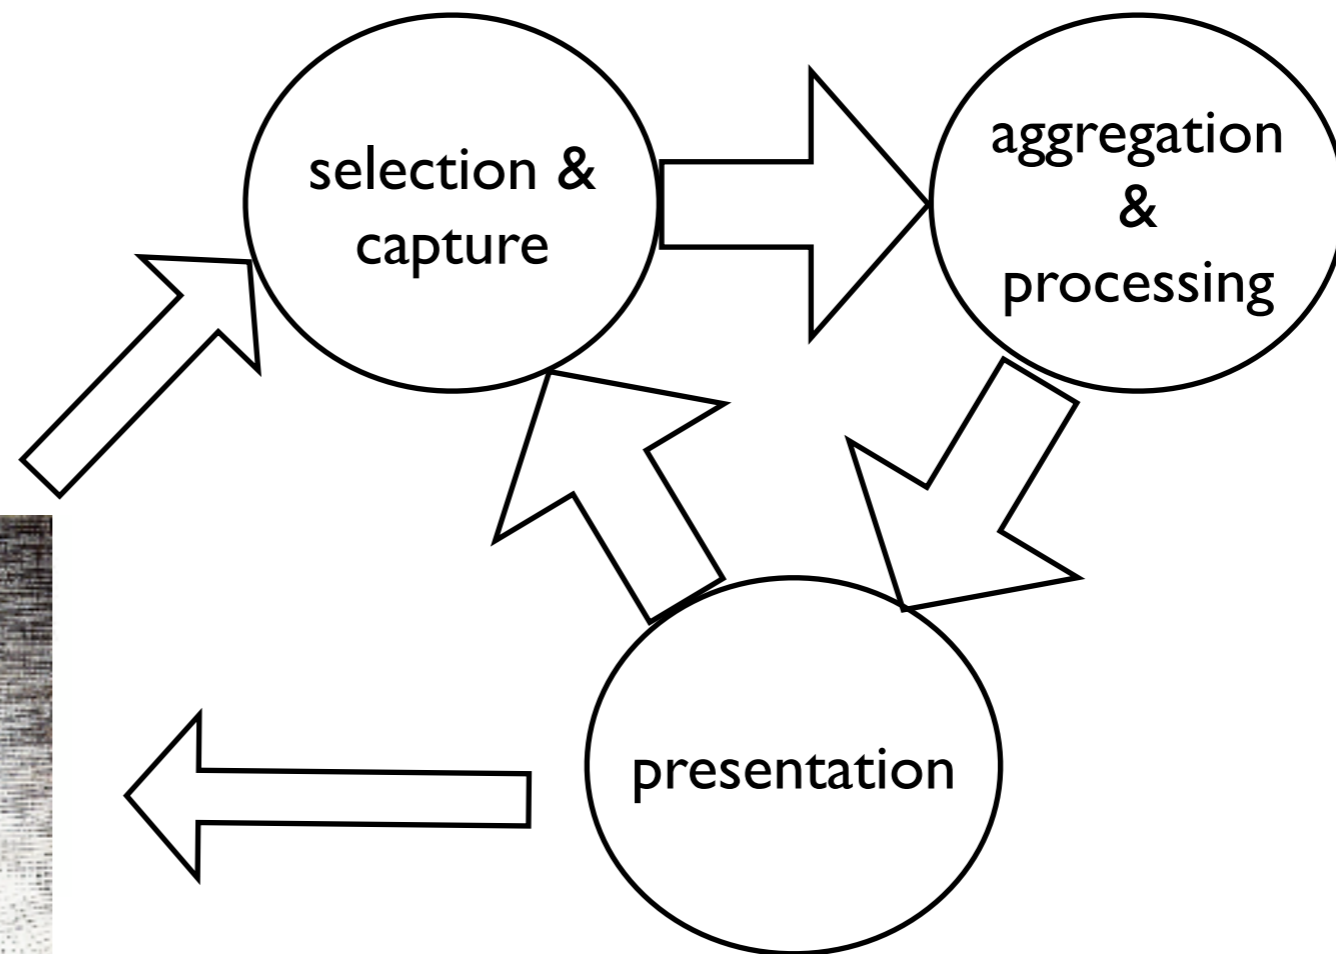

Context collapse

Filter bubbles

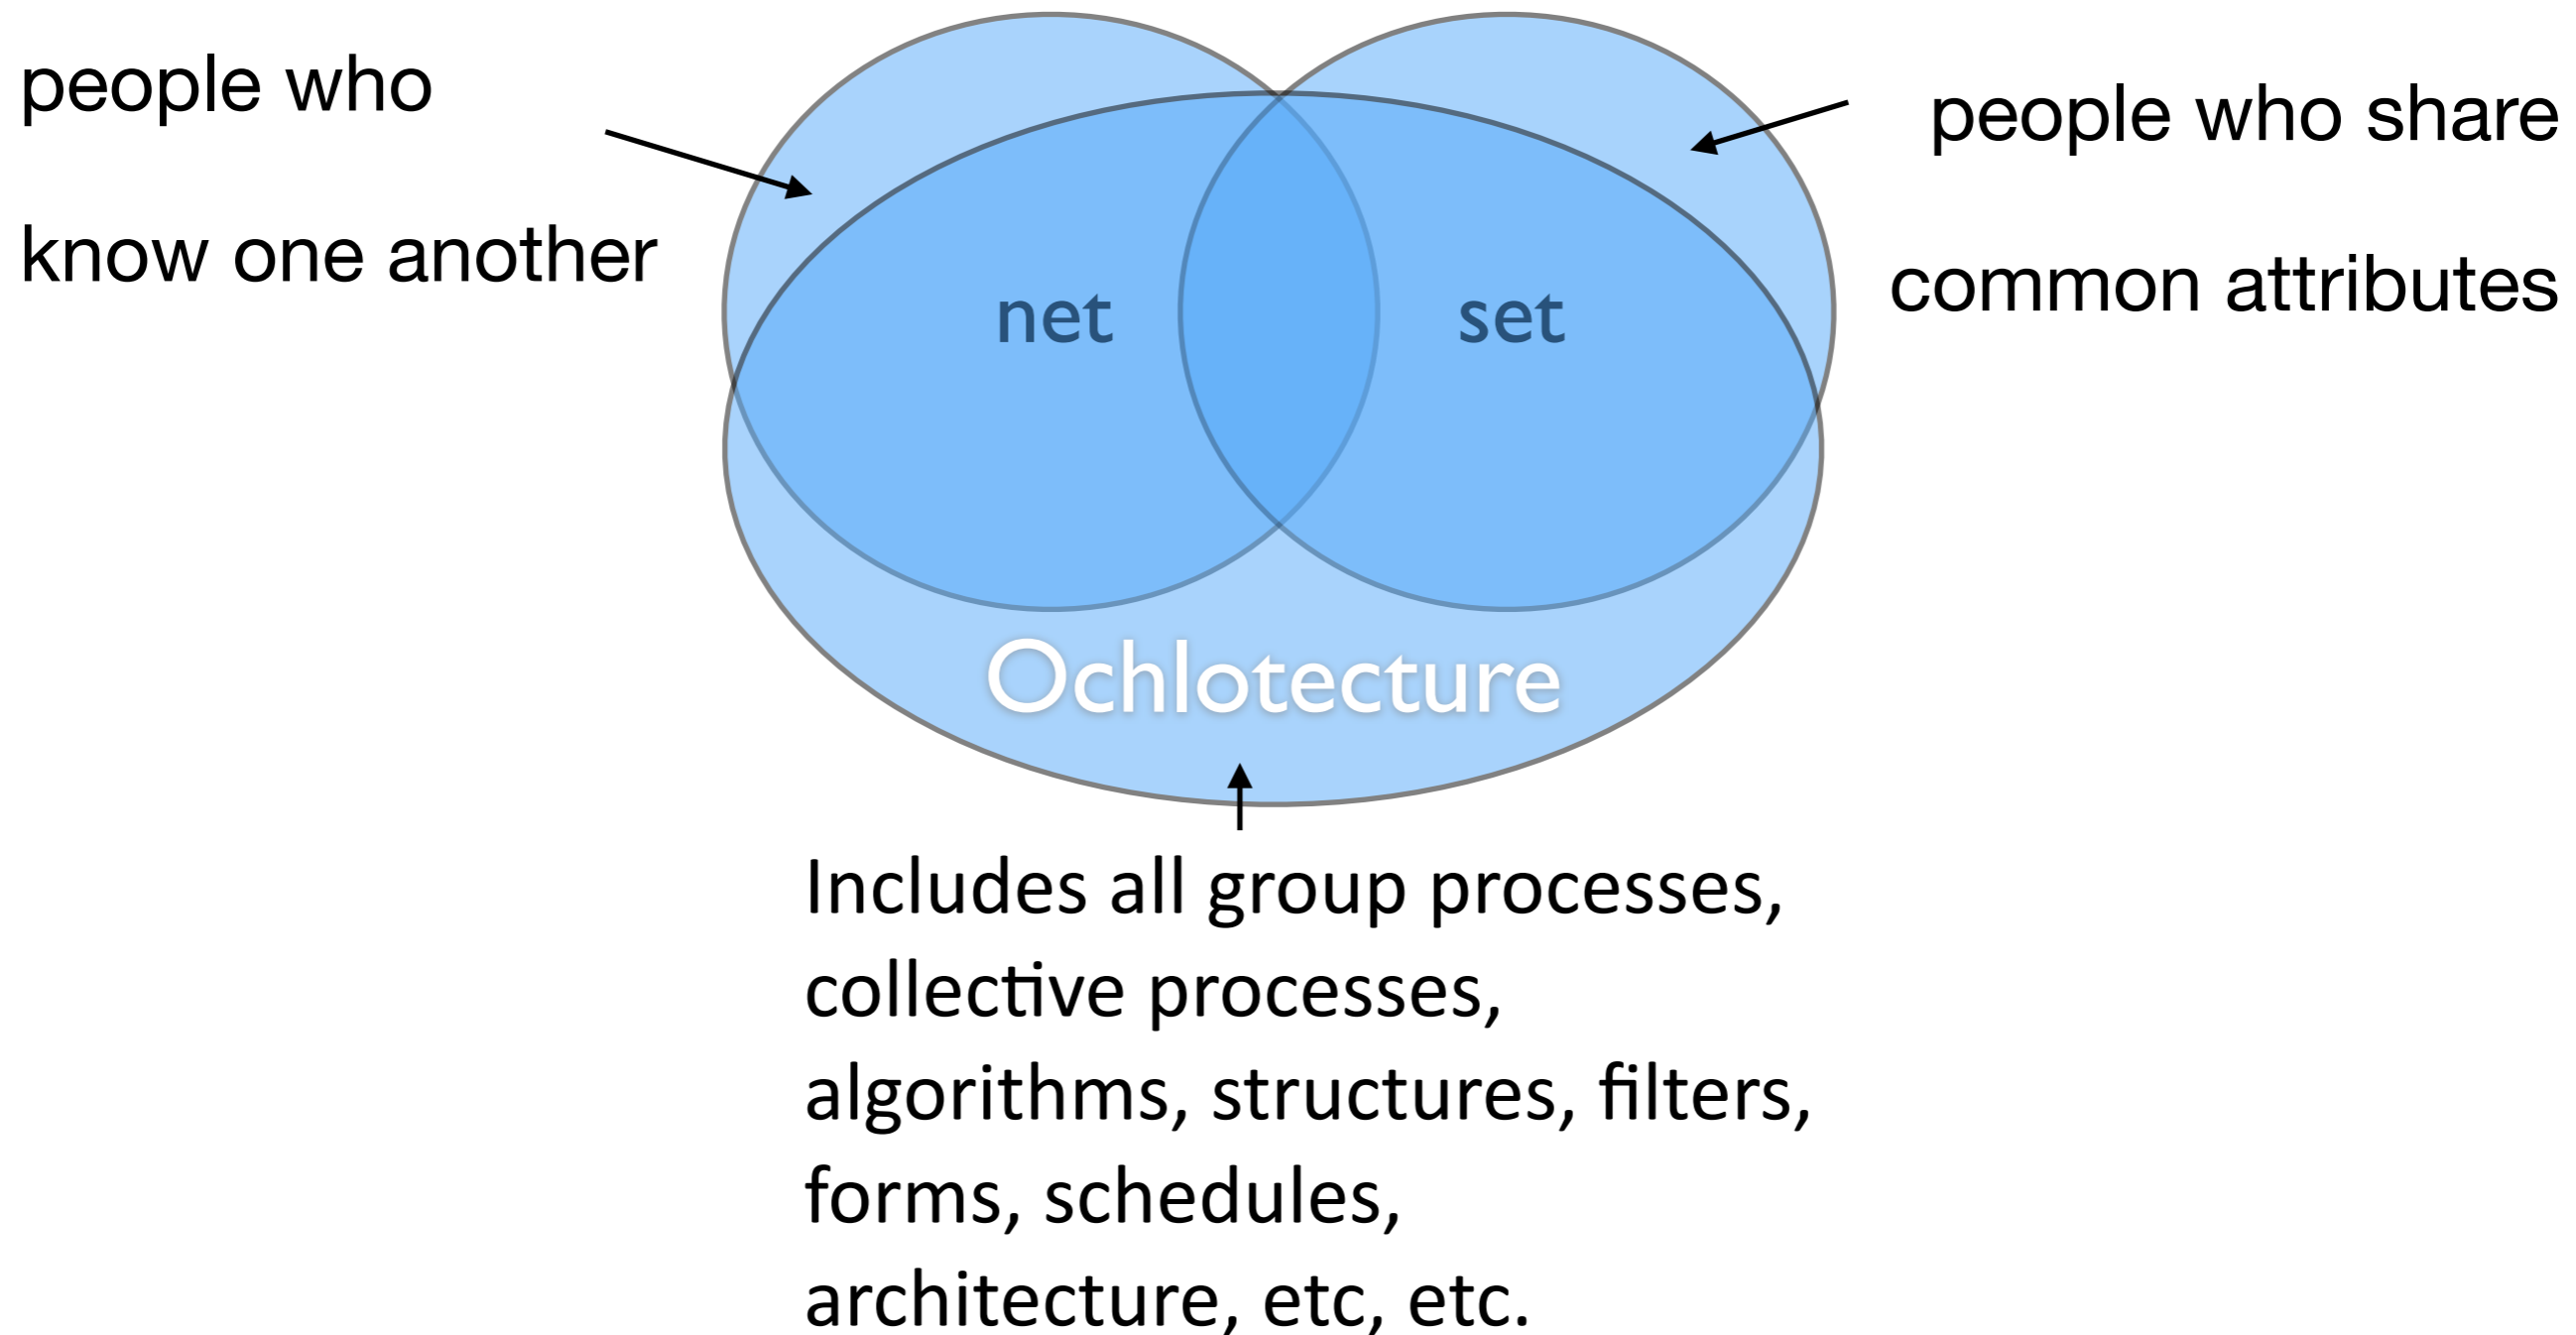

The Matthew Principle

The grey goo scenario

How I see it now

**“ochlotecture”, from the Classical Greek
ὄχλος (ochlos), meaning “multitude”
and τέκτων (tektōn) meaning “builder”.**

Ochlotectural technological elements

Orchestrational

Structural

Procedural

Regulatory

Material

Temporal

Model

Representational

Cultural

Environmental

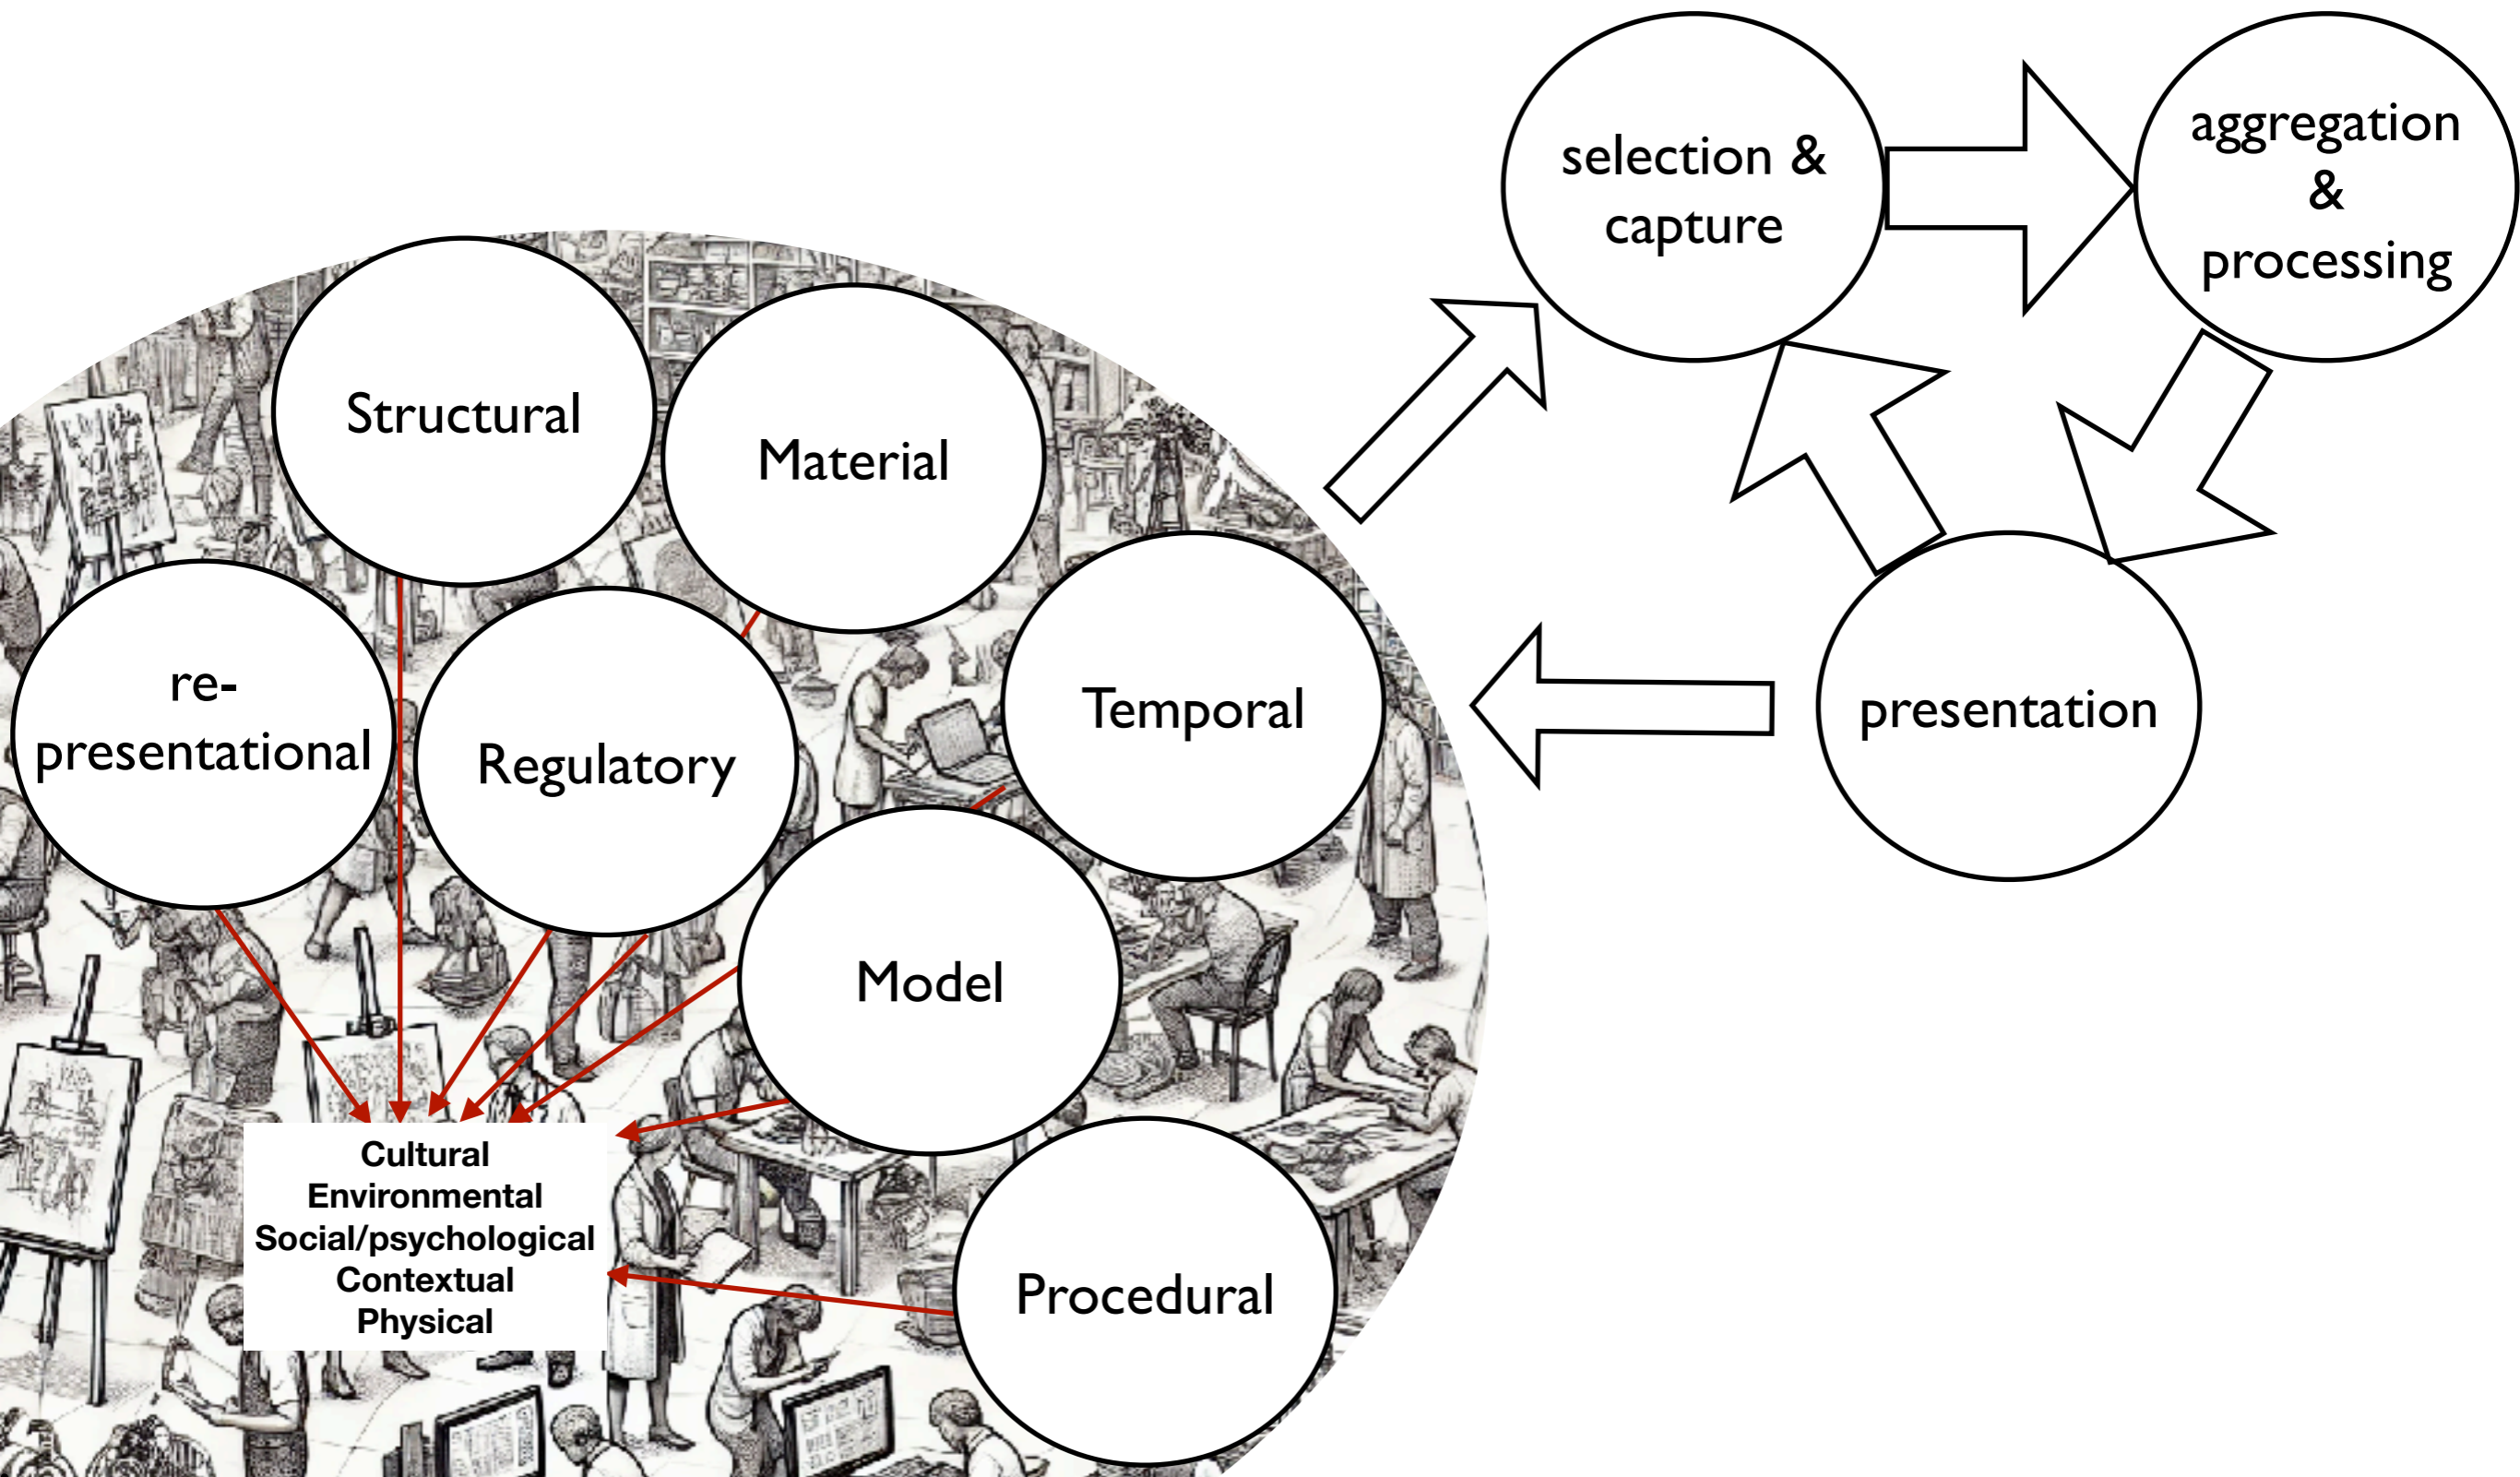

Social/psychological

Contextual

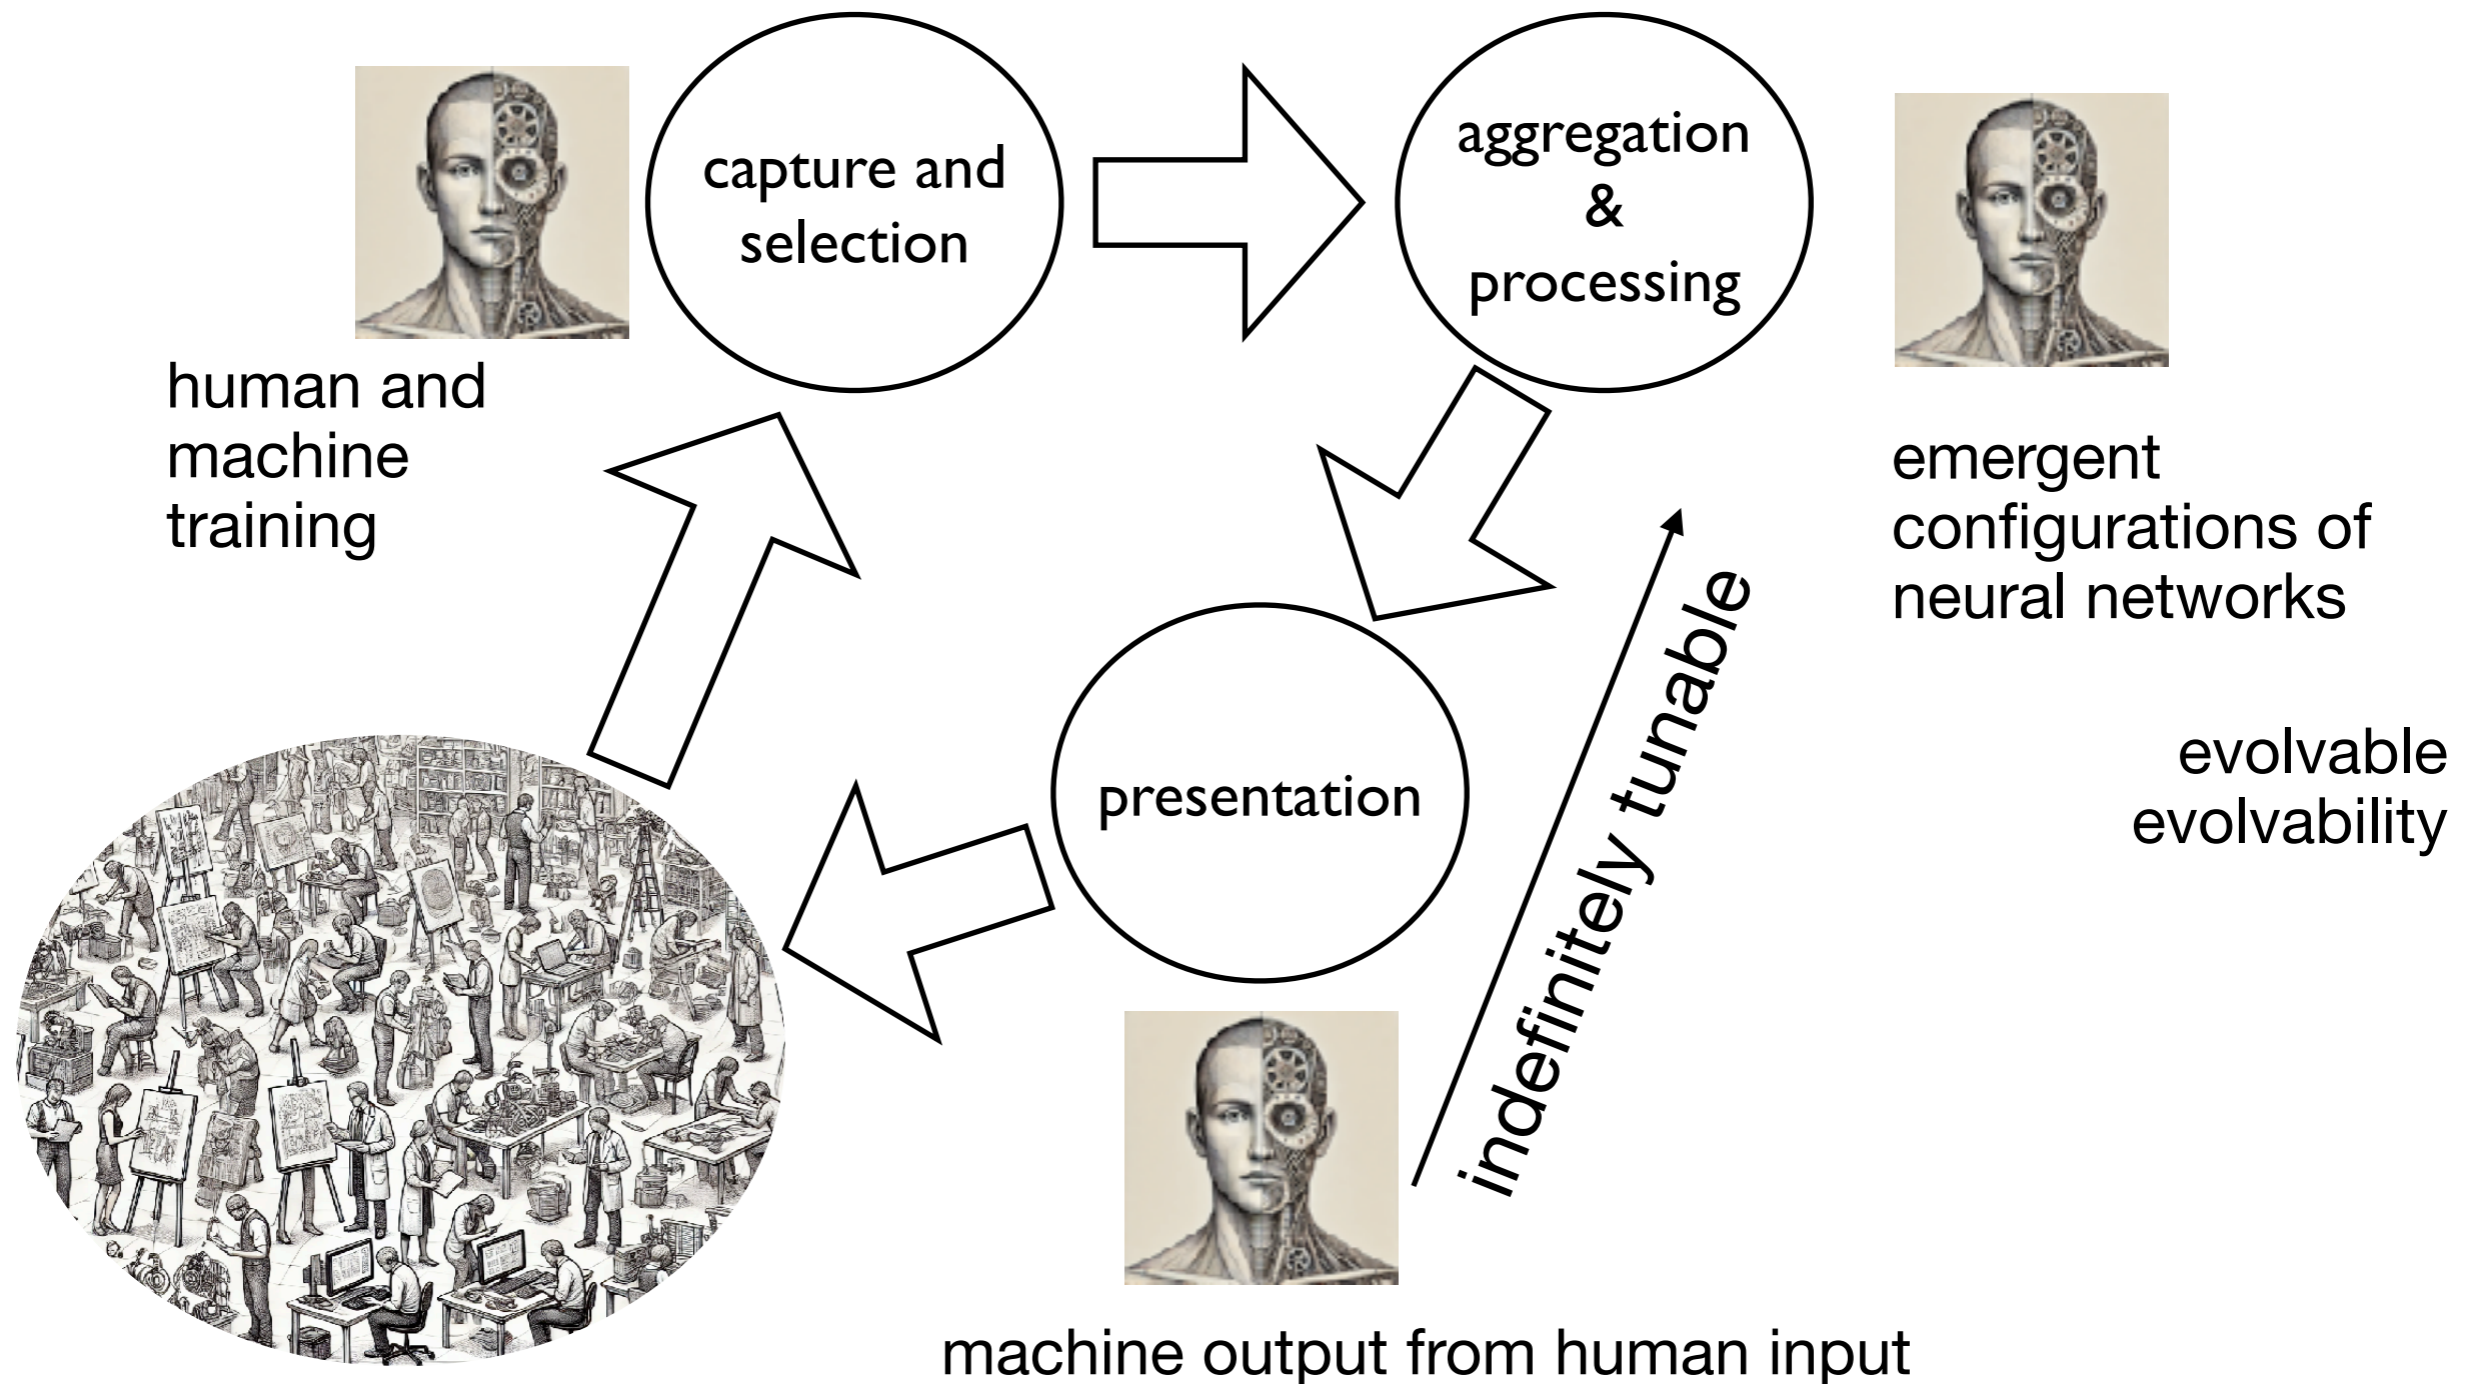

Physical

Phenomenal

Towards richer ochlotectures

LLMs as general-purpose collectives

ON THE INTERNET,
NO ONE KNOWS
YOU'RE A CROWD

KOM3.
